Profile

Hello, my name is Dario.
Enthusiastic, open minded and versatile software engineering student proficient in web development technologies. I posses a keen attitude for learning new technologies and methodologies with a proven track record of adapting quickly to new challenges. I have a passion for problem-solving and innovative solutions. Eager to apply my expertise and passion to contribute effectively as a Software Engineer.

Employment history

Prep cook, cook, McDonald's Deutschland LLC .... Jul 2023 — Oct 2023

Last year, during my participation in the Work & Travel summer program, I worked at a McDonald's shop in Munich, Germany. There i picked up a lot of soft skills, from which I will highlight some.
Because of the dynamic and fast paced work setting, I learned to be flexible and to adapt fast. This experience solidified my understanding of the indispensable role teamwork plays in achieving collective goals.
Moreover at my time at there I learned good work habits, like attention to details, strong work ethic. Whether it was maintaining cleanliness standards, inventory management , just being on time, i constantly strove for excellence.

Education

Faculty of Computer Science and Engineering .... Oct 2021 — Present
Software Engineer and Information Systems
Skopje

Currently third year of studies. So far here I have learned a lot of core programming concepts starting out from structural programming and object oriented programming. Then I've learned the core concept of web applications, web structure with HTML, CSS, then making the application front end lively with React JS. Later I learned how the back end of an application works, all the data flow, requests and responses through Spring Boot with MVC and Onion design patterns and lastly making the data president with databases like Firebase and PostgreSQL.
I have studied microservice architecture and making Rest Controllers in Java Spring Boot.
I've worked on a school project, called Winerverse with Spring Boot, Thymeleaf and bootstrap for frontend, which was centralized application for viewing and reviewing the wineries in Macedonia. There is a functionality to add wineries, review them, search with filters, view the wineries on a embedded map.
I've also worked on a ReactJS application called Movieverse, which was an online movie database, where you can add movies to your watchlist. I used different API calls to get the data for this app.

SSOU Kole Nedelkovski .... Sep 2017 — Jun 2021
Electro Technician for computer technology and automation
Veles

This is where I went to high school, and for me these were some of the most important year of my life, because it was here where my passion for programming was born. We learned the basics of programming in C, C++ and Pascal. We also programmed arduino boards, for a lot of different projects, using the program LD Micro.

Skills

- Spring
- Java
- ReactJS
- Javascript
- Django
- Python
- Unity 2D
- C#
- SQL

Languages

- Macedonian .... *Native*
- English .... *Working Proficiency*
